### ABSTRACT

This publication provides data for planning and assessing the education of secondary level students in Hawaii. Three sections are included: (1) General Information on Secondary Students; (2) Plans After Graduation, Class of 1969; and (3) Followup Survey of 1968 High School Graduates. Section One includes discussions of enrollments, promotion-retention, and holding power. Section Two determines that 80.9% of seniors plan to further their education. The arts and sciences are the most frequently chosen fields of study. Section Three presents only the activities or status of graduates within one year of graduation. The high degree of inconsistency of occupational activities with plans indicates that vocational guidance and instructional patterns must coincide to prepare (for long range planning) those who contemplate terminating formal education for a year or so. ### **ACKNOWLEDGMENT**

The Evaluation Section is especially gratefuly to all cooperating agencies for supporting data, coordination, and services. The Graduate Plans Survey questionnaire was jointly revised with research staff members of the University of Hawaii Institutional Research Office and Community College System and the Department of Labor and Industrial Relations. Some updated statistics for the section on General Information were provided by the Statistics Branch of the Office of Business Services. Computerized results for Sections II and III were made possible through the services of the Statewide Information System.

### FOREWORD

The 1969 publication of the Secondary Student Status Survey includes three sections:

- 1. General Information on Secondary Students (Public)
- 2. Plans After Graduation, Class of 1969 (Public and Private)
- 3. Follow-Up Survey of 1968 High School Graduates (Public and Private)

This survey has been conducted annually since as early as 1949 through the joint efforts of various state agencies. Throughout the years the survey, in varying degrees, has changed in format, title, and extent of data compilation and analysis according to need and resources available for conducting the survey.

Departing from last year's (1967-68) detailed survey that included a comprehensive study of dropouts, this year's survey was undertaken with the intention of limiting it to the above listed three sections.

### INTRODUCTION

As a central source of data about high school seniors, their post-high school plans and activities one year after graduation, the Secondary Status Survey provides some very essential data for planning and assessing the education of secondary level students.

Local post-high school institutions and state employment agencies need to know about the plans and problems that may confront graduating seniors. There are some problem areas that require investigation if students are to be assisted in planning for their future: financial problems forcing postponement of further education; the probability of not meeting entrance requirements for a preferred school; not knowing what occupation to prepare for; educational plans (of those postponing further education) for one or more years after graduation, etc. Through the survey, some data concerning such problem areas are made available to appropriate post-high school institutions and agencies. Planning for adequate facilities, staffing, and courses must take into account appropriate numbers of students (increasing or decreasing) planning to immediately further their education.

At the same time, the Department of Education and local private high schools can rely on the survey for data on whether substantial percentages of students do continue to plan for post-high school education and do continue to pursue further education a year after graduation. The degree to which graduates can plan successfully for post-high school activities can indicate to educators, to some extent, the effectiveness of educational provisions.

Also, the degree to which the graduates, a year later, follow up their promising

plans can serve as some measure of effective school provisions. The survey, then, becomes an important educative device for all concerned, students as well as educators.

## Section I

GENERAL INFORMATION ON
PUBLIC SCHOOL
SECONDARY STUDENTS

### ENROLLMENT

### School Year 1968-1969

Table I shows the enrollment count of grade 9-12 students at three different times during the school year. As was noted last year, a decrease in enrollment is evident during the course of the school year in every grade level except in grade 9.

Table I
Secondary Student (Gr. 9-12) Enrollment\*

Grade	Sept. 1968	Dec. 1968	June 1969	% of Decrease SeptJune
9	12,549	12,629	12,417	1.1
10	12,091	11,951	11,475	5.1
11.	11,280	11,124	10,754	4.7
12	10,024	10,023	9,879	1.4
Total	45,944	45,727	44,525	3.1

### 1955 to 1971

Aside from the upward trend of growth in secondary student enrollment, the rate of enrollment increase from year to year differs unpredictably at times for Hawaii's public high schools (see Table II) possibly because of such factors as varying migratory patterns of military family groups, transiency of civilian families (for temporary or permanent residence in Hawaii), etc. When massive military transfers of troops and families coincide with school enrollment count dates, enrollment statistics can be affected significantly.

<sup>\*&</sup>quot;Special Students" (in special education classes: MRE, learning disability, etc.) are not included.

Table III shows the extent of federally-connected student membership in Hawaii's public schools. Federal defense spending in Hawaii determines to what extent federally-connected civilian and military families transfer in and out of Hawaii. The transiency of these federally-connected groups can significantly affect Hawaii's school membership.

Table II

### PROMOTION - RETENTION

To achieve promotion in grades 9-11, students must earn four or more units each year. Actual grade placement may be determined by administrative conditions peculiar to each school (schools may take into consideration individual differences and may waive certain requirements). Graduation is based on credits earned in grades 9-12. A total of 18 is required, 14 of which must be earned in grades 10-12.

	Required Credits
English	4
Social Studies	4
Physical Education	1
Mathematics	1
Science	1
Health	1/2
Electives	6-1/2

The following Tables IV and V list rates of retention in grades 9-12.

Grade	June Enrollment	Promoted	Retained	% Retained
9	12,417	12,118	299	2.41
10	11,475	11,038	437	3.81
11	10,754	10,437	317	2.95
12	9,879	9,618	261	2.64
Total	44,525	43,211	1,314	2.95

Table V
Per Cent Retentions, 1963-69\*

Grade	1963-64	1964-65	1965-66	1966-67	1967-68	1968-69
9	1.60	1.57	2.52	2.72	2.44	2.41
10	2.16	1.88	1.50	2.71	3.62	3.81

12	1.89	2.05	1.81	2.38	2.14	2.64
Total	1.78	1.86	1.83	2.48	2.70	2.95

<sup>\*&</sup>quot;Special" students are not included.

### HOLDING POWER

Holding power was indicated here by noting the number of students who entered grade 9 in a given year and the number who graduated four years later. The rate of holding power was determined by dividing the number who graduated by the number who entered grade 9. This present method of calculation is over-simplified and crude and can be improved only by a total pupil accounting system. Records of transfers, dropouts, deaths, and holdovers can then be fully accounted for in calculating true holding power rates.

A look at Table VI readily indicates that the holding power rate of Hawaii's public secondary schools has increased during the past decade. The per cent of 1965 ninth graders who graduated in 1969 was 87.9. Table VII compares Hawaii's holding power with those of other states. This high rate of holding power may be attributed to intensified interest at the national and state levels to diminish the number of school dropouts and the continuing effort of schools to improve instructional and guidance programs. The dropout rate, however, is not the only factor which affects the holding power. The number of students promoted and retained and the number of out-of-state or private school transfers also have direct relationships on holding power.

# SECTION II

PLANS AFTER GRADUATION
CLASS OF 1969
(PUBLIC AND PRIVATE)

### PURPOSE

Educators generally agree that the main objectives of a comprehensive high school should be: 1) to provide a general education for all future citizens; 2) to provide good elective programs for those who wish to use their acquired skills immediately on graduation; and 3) to provide satisfactory programs for those whose vocations will depend on the subsequent education in a college or university.

Public high schools usually attempt to fulfill all three of the objectives (as recognized by Conant and others as well). The private high schools appear to emphasize the third objective. With objectives firmly established, educational programs are assumed to be planned accordingly. By the time the students are ready for post-high school activities, it should not be too difficult for them to arrive at decisions regarding post-high school plans. Throughout their high school years, the students are guided by academic and vocational counseling and testing.

The annual graduate plans survey helps to crystallize the plans of graduating seniors. The data compiled annually help to provide substantial background information for program planning at the school, district, and state levels; inform the community of any changes regarding education and employment of youth; provide the State Department of Labor and Industrial Relations with information regarding prospective youth employment trends; and provide post-high school institutions with information for future planning.

CHARLES OF THE PARTY OF THE PAR

### PROCEDURE

Information reported in this section was collected through a questionnaire (see page 17). The questionnaire was completed by 92.2 per cent of all private and public high school seniors in the State in a classroom or largegroup testing situation during the latter part of the school year. This year's questionnaire format is essentially the same as last year except for: 1) more detailed coverage of plans to enroll in Hawaii post-high school institutions, 2) reasons for not going to school in September 1969, and 3) educational plans of those furthering education later than September 1969. To keep some kind of consistency with data collected since 1952, the questionnaire was designed to render essentially the same information as past instruments as well as certain other data.

### STATISTICAL TABLES

Table I-B reports the plans of the 1969 senior class, private and public. The table shows that 11,112 seniors responded out of 12,058, for a 92.2 per cent return. Separate totals for public and private school seniors are indicated, and per cent figures are based on these separate totals. Those seniors who responded were separated into two groups — "further education plans for September 1969" and "not further education plans for September 1969."

Seniors who intended to further their education but did not know yet what type of school they would enroll in are found in the row labeled "Don't Know" under the general heading of "Further Education." In similar manner, those seniors who had no intention of furthering their education in September 1969, but did not know exactly what they were going to do after graduation are found in the

<sup>\*</sup>The category of "occupational school" includes business schools, technical schools, and two-year junior and community colleges that provide occupational training within, generally, two years. A differentiation is made between those who are planning to be enrolled in two-year colleges for eventual transfer to four-year colleges and those who are planning to be enrolled for occupational training, generally, for two years only; this differentiation is made by including the second group of students within the category of "occupational school" rather than within the two-year college category.

row labeled "Don't Know" under the general category of "Not Further Education." The per cent figures under the categories of "Further Education" and "Not Further Education" are based on the totals for each category.

Table I-B also provides data on why students are not planning to enroll in school in September 1969. Both private and public school seniors cite the reason "want to fulfill military obligation now" more frequently than any other reason. Another frequently mentioned reason is "don't know what occupation to prepare for." Economic reasons "don't have or cannot obtain money" and "needed at home" reason fall in the least frequently cited category of reasons.

Table II-B reports the region or country where those seniors who planned to further their education intend to take up their studies. All fifty states, Washington, D.C., U.S. territories and foreign countries are listed. Those who are not yet definite about their future school location are found in the row labeled "Unknown."

Table II-B also lists plans for enrollment in schools located in Hawaii.

A total of 69.4 per cent of those (public and private high school seniors)

planning to further their education in September 1969 plan to remain in Hawaii

for further education. Of those planning to remain in Hawaii, 39.9 per cent

plan to enroll at the University of Hawaii, 11.3 per cent indicate "don't know,"

8.5 per cent plan to enroll in private colleges and other institutions (beauty,

fashion, business, etc.), and 40.3 per cent plan to enroll in the various

community colleges.

Table III-B indicates in what fields graduates who intend to further their education will be majoring. The major fields are first listed by broad cate-

pories and according to the type of school where students plan to enroli.

Data on the type of school at which major fields will be pursued can provide information as to approximately when and how many professional and technical personnel will be available for employment within specified periods of time (with education and training time accounted for). A business major at a two-year occupational school will generally be available for employment at the end of the two years with training available for specific levels of employment. In contrast, a business major purusing four years of education and training at a college or university will generally be available for employment at the end of four years, with training suitable for higher educational levels and which may differ to some degree from those of two-year occupational school graduates.

Table IV-B reports the occupations of those who plan to work full time. Table V-B shows the distribution of future educational plans of the 1,548 seniors not furthering their education in September 1969.

Tables VI-B and VII-B report the plans of seniors school by school. The left portion of Table VI-B shows the number of seniors who completed the questionnaire. Of these, a further enumeration is made on the number with educational plans for September 1969 and the number without educational plans for September 1969. Table VII-B is an enumeration of those who have plans to further their education in September 1969.

### SUMMARY\*

### Plans for Furthering Education

Of the 11,112 seniors who responded, 80.9 per cent plan to further their

<sup>\*(</sup>The summary above is based on the statewide data in Tables I-B through V-B. Schools should utilize the data in Tables VI-B and VII-B for their own use.)

ERIC

education in September 1969.

As it is the responsibility of the public schools to provide for all segments of the population, it is to be expected that the per cent of college-bound seniors from public schools is offset by those terminating their education or planning for enrollment in two-year occupational schools instead. Private schools are generally college preparatory and this is reflected in annual statistics on college plans. The per cent of private school seniors planning for four years of college education continues to remain higher than that of public schools, 76.3 per cent for private schools compared to 47.8 per cent for public schools.

Major Fields of Study

Among the broad categories of major fields, arts and sciences are more frequently selected as major areas of study. Business ranks next in frequency of selection. Except for trade/industrial programs of study and training, the other fields of study generally rank similarly for both private and public schools: education, engineering, health sciences, home economics, and agriculture.

A substantial 29.2 per cent of public school students and 25.4 private school students still are not certain about their field of interest. Students may take as long as a part or all of their undergraduate years in college to decide on their major field. This period of exploration may prove to be advantageous for some, while others will stand to gain from early pursuit of a chosen field. Location of Schools

Plans for the location of the school continue along the same pattern as in the past but with a 13.4 per cent increase this year of public school students remaining in Hawaii and a 7.1 per cent increase of private school seniors plan-

ning likewise. Hawaii students who plan to attend school outside of Hawaii tend to concentrate along the westernmost states of the mainland: California, Oregon, Colorado, and Washington. Eastern states are selected in greater frequency, proportionately, by private school seniors. As stated in the past, private school seniors are assumed to come from more affluent families that can afford out-of-state educational expenses for their youngsters. The number of four-year colleges is limited in Hawaii and students in large numbers continue to move on to the mainland for individual preferences.

#### Occupations

Selection of occupations for full-time employment after high school includes business, service and unskilled work such as secretarial work, saleswork, waiting on tables, and trade apprenticeship. (See Table IV-B for details.) The following summarizes the most frequently selected occupations by public high schools (private school listing is not included because of negligible numbers involved).

		Per Cent
Occupation	No.	of Public
Stewardess/steward	13	2.8
Salesman/salesgirl	18	. 3.9
Secretary or stenographer	8	1.7
Waiter/waitress	18	3.9
Laborer, construction, etc.	12	2.6
Other	76	16.3
Don't knew	212	44.7

The annual follow-up survey of 1968 public and private high school grauates indicated that of all the working graduates, the following were involved in similar service and unskilled types of work:

<u>Occupation</u>	Per Cent
Clerk	7.3
Sales	6.8
Laborer	6.0
Service station attendant	5.8
Waiter, waitress	3.8

Plans of graduates do not heavily include "service station attendant" but, in reality, it appears to be among the few occupations that can absorb the graduates who do not go on for further education.

#### Plans for No Immediate Further Education

Of the 11,112 respondents to the survey questionnaire, 2,120 students (19.1 per cent) indicated no plans for immediate further education after high school. However, of the 2,120 students 72.0 per cent of the public and 89.3 per cent of the private school seniors reported plans to further their education at a later date.

Of all those not immediately furthering their education in September 1969, 21.2 per cent of the public and 16.5 per cent of the private school seniors indicate that they are uncertain about plans for September 1969.

### SECTION III

FOLLOW-UP SURVEY OF
I968 High School GRADUATES
(PUBLIC AND PRIVATE)

#### PURPOSE

A follow-up of graduates one year after graduation can possibly provide the following kinds of information: 1) consistency of senior-year plans with post-high school activities, 2) relationship of final college and other school placements to class rankings, and 3) statistical data (percentages qualifying for enrollment at various types of schools, types of employment for those "fully employed," and percentage of graduates failing to pursue definite post-high school activities within a year after graduation) for the evaluation of school objectives and programs offered (college preparatory, general, or vocationally-oriented). The report on the status of Hawaii's 1968 graduates was designed to provide such information as well as a broad basis for other analyses and comparisons.

#### PROCEDURE

In recognition of the reliability and economy (in terms of time, materials, and effort) of sampling procedures and for the purpose of minimizing work load at the school level, the follow-up survey of 1968 graduates was designed to include only a sampling of the total public and private school graduates. At a confidence level of .95 per cent, 5,854 graduates were randomly selected.

The key instrument in collecting data for this survey was the Follow-Up .

In February of 1969, cards for each graduate were sent to all public and private schools with a 1968 graduating class. All cards were completed by the beginning of May. This Office had earlier requested all local post-high school institutions, universities, colleges, commercial, technical schools, etc., to submit lists of 1968 high school graduates enrolled in their respective institutions. As information was provided, some of the cards were filled in by this Office and sent to the schools only for confirmation and the entering of the graduate's class rank and marital status.

For those graduates whose names had not been reported by the local educational institutions, school personnel indicated their after-high-school activity after checking with relatives or friends still in school, calling the graduate's home, or getting the necessary information by some other means. Schools were specifically instructed not to send the cards home as this procedure resulted in very few responses in the past.

#### Limitations

- Non-Direct Response: As explained above, the results should not be considered as direct responses from the graduates. A choice had to be made between obtaining direct responses from the graduates, and settling for few returns, and the non-direct method with perhaps less accuracy, but almost 100 per cent coverage of all sample graduates. The latter plan was chosen.
- 2. Class Rank: The schools that responded to the request for their listings of criteria used for determining class rank reported averaging grades
  earned in all the courses pursued from grades 9-12. Limitation should be
  recognized, however, in the existing differences in grading standards from

teacher to teacher and from school to school.

3. Immediate Activities: Activities reported should not be considered either permanent or non-permanent enterprises. The survey makes no attempt to differentiate along these lines. Actually, it can be said that just about all those in school are in a non-permanent category. This may be just as true for those in military service, although a substantial number may be career persons. Some of those working full-time may have school plans later and those in junior colleges or other schools may enter a four-year college or university before their school careers end. The activities indicated, then, should be regarded as immediate — within one year after graduation.

#### FINDINGS

#### Status Within a Year After Graduation

Though this year's follow-up study included only a sample group of 5,854 out of a total of 11,563 graduates, final data are similarly distributed among the various activities (specified in Table I-C) as last year's. (Of the total sample group, follow-up data for 5,778 [98.7 per cent] were compiled.)

Among the selected sample graduates, 65.6 per cent are engaged in furthering their education. As last year, a substantially larger group of those furthering their education are enrolled in four-year colleges.

The category of "occupational school" includes business schools, technical schools, and two-year junior and community colleges that provide occupational training within, generally, two years. A differentiation is made between

TABLE I C ACTIVITIES OF 1968 HIGH SCHOOL GRADUATES (SAMPLES)

those who are enrolled in two-year colleges for eventual transfer to four-year colleges and those who are enrolled for occupational training, generally, for two years only. Table I-C shows that 10.7 per cent of the sample graduates are enrolled in two-year colleges pursuing a college transfer program. Those enrolled for occupational training total 15.8 per cent of the sample group. A total of 26.5 per cent are enrolled in two-year post-high institutions. This is an increase of 2.6 per cent over last year's 23.9 per cent.

Not unusual differences are noted between the activities of public and private school graduates. Among private school graduates, 83.8 per cent are found to be furthering their education and among public school graduates, 59.1 per cent are enrolled in school. The per cent of private school graduates (63.4%) enrolled in four-year colleges more than doubles the per cent of similarly enrolled public school graduates (29.6%). This is expected of the almost wholly college preparatory private schools with a carefully selected pupil population.

#### Relationship Among Quintile Class Standings and Activities

Table II-C again specifies the nine activity categories, but this time the distribution is rearranged according to the graduates' quintile standings as reported by the schools. Schools were requested to determine each graduate's standing by applying the same method they use in filling out college applications.

A variety of analyses and comparisons can be made from the data in Table

II-C from which inferences can be made. Rather than going into a great amount

of detail (the reader is encouraged to make other comparisons from this table

TABLE II C - QUINTILE GROUPS, BY ACTIVITIES (SAMPLE TOTAL - PUBLIC AND PRIVATE)

TOTAL	2906	2872	5778	422	157 1179		498	1 689	1187	628	624 1	1252	670	444 1	1114	680	354 10	1034	æ	~ ~	25

as well as the school-by-school breakdown in Tables IX-C and X-C), the following schematic design is presented to show which quintile groups have the most and the least representation in the major activity categories, and in which quintile group the median falls for each activity:

large of number

The quintile group under which the large circle is placed has the largest number of graduates for that particular activity category.

0 -

The quintile group under which the small circle is placed has the smallest number of graduates for that particular category.

-

The quintile group, under which the black dot with a horizontal line running through it is placed, represents the group in which the median falls for each category.

#### QUINTILE GROUPS

<del></del>					
ACTIVITY	5	4	3	2	1
CATEGORIES	1%-20%	21%-40%	41%-60%	61%-80%	81%-100%
Four-Year Colleg <b>e</b>	0				
Two-Year Jr. College					0
Occupational School					Θ
Employed	0			,	Q
Military		-	,		0
Not Employed, Not in School		•			0

From the above, it can be readily seen that the distribution of graduates

is skewed left in the four-year college category, and the mode and median move to the left as one reads downward to the last listed category, not employed/not in school. (The categories are not necessarily listed according to a rank or "social ladder.")

## Relationship of Plans Before Graduation and Actual Activities Within a Year After Graduation

As a total group, the 5,854 sample graduates of 1968 displayed some stability between their plans (May 1968) before graduation and their actual activities one year later (May 1969):

Plans <u>May, 1968</u>		Actual Activities May, 1969
81.6%	Further Education	65.6%
4.0	Full-time Employment	11.3
8.4	Military Service	10.0
////	Not in School or Employed	5.8
////	Deceased	.1
////	Location Unknown	7.2

A further breakdown of those in the "further education" category shows the following:

Educational Plans May, 1967		Educational Status May, 1968
51.9%	Four-Year College	58.6%
16.3	Two-Year Junior College	16.4
26.1	Occupational School	24.0
1.3	Other School	1.1
<b>4.</b> .5	Don!t Know	////

Again, as a total group, the sample graduates displayed noticeable stability between their plans (May 1968) before graduation and their actual activities one year later in 1969.

The discussion so far has been limited to plans and actual activities of the graduates, collectively as a group. The data in Tables III-C and IV-C add a great deal more light to the picture as each individual graduate's plan was matched with his actual status one year later. Table III-C groups the graduates according to their actual activity (by columns) and their original plans (by rows) are enumerated. Table IV-C groups the graduates according to their original plans (by columns) and their actual activities (by rows) are enumerated. (These figures reflect only major categories.)

Discussion of the data in these two tables can go on almost endlessly. The reader is left to find inferences of value. Of significance is the fact that those in four-year colleges showed the most stability between plans and actual activity. In Table III-C, of the 2,217 sample graduates in the four-year colleges category a year after high school, 89.1 per cent had planned to enroll in this type of school before graduation. In Table IV-C, of the 2,538 seniors in high school in 1968 who planned to attend a four-year college, 77.9 per cent fulfilled their plans while others enrolled in other types of schools, found employment, entered military service, or were still "not employed nor in school."

In the military service category, a high level of stability (compared to that of other categories) is noted between plans and the actual activity a year later. Of the actual number in military service a year later, 41.3 per cent had

# To read this table:

Each column groups the 1968 sample graduates, public and private, according to their actual activities one year after graduation, as identified in each column heading. The column heading also includes the number of respondents in that particular group. Reading vertically, one can say that of the 576 sample graduates who are in the military, 238 had planned before graduation to enter the armed forces, 61 had planned to attend a four-year college instead, 68 had no definite plans, and so on. Figures are not additive because only major categories are shown.

# To read this table:

Each column groups the 1968 sample graduates, public and private, according to their plans, which are identified in each column heading. The column heading also includes the number of sample graduates in that particular group. Reading vertically, one can say that of the 2,538 who aspired to enter a four-year college, 1,976 followed through and the rest changed their minds -- 188 went to a two-year junior college instead, 96 to occupational schools and so on. One can also say that among those who had no definite plans, the largest number became fully employed. Figures are not additive because only major categories are shown.

previously planned to enter military service (Table III-C). Of the students who contemplated upon entering military service, 48.4 per cent fulfilled their plans (Table IV-C).

Only 9.6 per cent of those fully employed a year later had planned to work full-time, while 13.6 per cent of those "not employed nor in school" a year after graduation had planned to enter the work force before graduation. Of those who planned for full-time employment, 32.5 per cent fulfilled their plans.

It can be seen in Table IV-C that among those who had "other plans," 30.5 per cent were found to be not employed nor in school, and of those with "no plans," 24.4 per cent became fully employed and 14.1 per cent were not employed nor in school. The table also shows that 32.5 per cent of those who planned to work full time after high school found employment.

#### <u>College and School Location of</u> <u>Graduates Pursuing Further Education</u>

Again, as in the past, every state in the union has at least one 1968 graduate from a Hawaii high school attending a post-high school institution. Table V-C shows that the graduates are enrolled in greatest numbers at the following locations: Hawaii (68.8 per cent), California (8.9 per cent), Washington (4.8 per cent), and Oregon (4.1 per cent). The location of .6 per cent of the in-school graduates could not be determined.

#### Occupations of the Working Graduates

Table VI-C shows that the 655 sample graduates (11.3 per cent of the total sample) who are employed full time are most frequently engaged in clerical, sales, unskilled, and service job classifications as listed below:

Clerical	7.3%
Sale <b>s</b>	6.8
Laborer	6.0
Service Station Attendant	5.8
Waiter, Waitress	3.8

To occupationally inexperienced graduates the above job classifications appear to be more easily and frequently available than others with perhaps fewer turnover of vacancies, more specialized skills, etc.

#### Marital Status

Similarly as last year, only 2.7 per cent (2.6 per cent for 1967) of the graduates are married, and of this group, 76.0 per cent are females. Of the married graduates (almost entirely females), 55.8 per cent are not employed nor in school. Among the male married graduates, 62.9 per cent are fully employed. See Table VII-C.

#### School-by School Breakdown

Tables VIII-C, IX-C, and X-C are presented primarily for use by individual schools. Table VIII-C gives the total number of graduates of both public and private schools for 1968 and the number of sample respondents (5,778) accounted for in this survey (98.7 per cent for all public and private schools). The public schools (by districts) are listed first, followed by the private schools. The number of respondents per school is broken down into quintile groups (based on the graduates' class standings or ranks which are usually determined on grade-point averages). Comparison of quintile group distributions of various schools should not be made without taking into consideration

differences in grading standards and group characteristics. (The "total" percentages in Table VIII-C are based on the number of sample June graduates; the percentages for each quintile group are based on the number of respondents.)

Table IX-C indicates (school by school in the same order as Table VIII-C and by quintile group) the activities of the 1968 graduates who are furthering their education. For each individual school, this and Table X-C are a starting point for the correlation of what graduates are doing within one year after high school and their high school standing. The "total" percentages for each school are based on the number of respondents for all activity categories in Tables IX-C and X-C. The percentages for each quintile group are based on the number of respondents falling in each particular activity category. Schools may compare the distribution of the percentages for each quintile group with the data in Table II-C.

Table X-C may be used in the same manner as Table IX-C. The activity categories in Table X-C are those that are not related to further education.

#### SUMMARY

The follow-up information presented in this section reflects only the activities or status of our graduates within one year after high school. Though the activities reported may be of temporary nature for some of the graduates for a year or more, the compiled statistics indicate the immediate result of each graduate's effort to plan ahead (undoubtedly in varying degrees) academically and occupationally. For those whose activities show inconsistency with plans for further education, there is no question about the need for vocational guidance (in and out of school), financial assistance, and oppor-

tunities to enroll in occupational schools and colleges. Clearly, the high degree of inconsistency of occupational activies with plans indicates to educators that vocational guidance and instructional programs must coincide to prepare (for long-range planning) those who contemplate terminating formal education for a year or more. Unprepared "fully employed" graduates will eventually need to further educate or train (occupationally) themselves if they are to fulfill their hopes and aspirations.
